

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved.

2. The second step is to define the requirements. This involves determining what the system is intended to do and what it needs to succeed.

3. The third step is to design the system. This includes creating a detailed plan for how the system will be built and how it will be tested.

4. The fourth step is to implement the system. This involves building the system according to the design and testing it to ensure it works as intended.

5. The fifth step is to maintain the system. This involves monitoring the system for problems and making changes as needed to keep it running smoothly.
